PROJECTS

Helping Hands –Internship Project
This application is developed with the aim of helping those needy persons who need money due to some problem. It offers one click access to all donors who wants to make some donation by displaying them the data of the needy persons digitally. Social worker will upload the post about the needy person and all the other social workers and donors can view it.
Technologies involved: Android & Firebase.

Tailor App –Mini App
This application manages the Tailor shop business digitally and reduces paper work. Saving record digitally can help tailors in viewing the client record on the go. Changes can also be made to client's record in very convenient way – anytime, anywhere.
Technologies involved: Android & Android SQLite Database.

Pharmacy Management System –Training Project
This project is a desktop application which is designed to improve accuracy and to enhance safety and efficiency in the pharmaceutical store. It helps the pharmacist to improve inventory management, manage the records of customers, employees, dealers, companies, suppliers and also does bill generation.
Technologies involved: Java & MySql.
